

## Good news for Newton electricity customers!

There's not much good news these days as far as energy prices are concerned, but Newton Power Choice is a distinct exception. If the State Department of Public Utilities (DPU) approves the electricity rates that Eversource just proposed, **participating in our Newton Power Choice program will be much less expensive for the next six months than remaining on Eversource Basic Service.** At the Newton Power Choice default rate (82% renewables), you save approximately \$67 per month, or \$400 over the next six-month period, as compared to Eversource Basic Service.

Assuming the DPU Eversource's proposal, the price for Eversource Basic Service electricity for residential customers for January 1 through June 30 will be 25.6 cents per kWh. This compares to last winter's Eversource Basic Service rate of 15.8 cents per kWh.

For comparison, here are the Newton Power Choice residential rates (through January 2024) compared to Eversource's proposed **25.6 cents/kWh** rate:

This is how the savings break down for the median Newton residential customer, who uses 550 kWh per month. The savings are even greater for customers who use more electricity.

NPC	NPC rate per kWh	kWh use per month	Eversource rate per kWh*	Savings per kWh	Savings per month	months	6 month savings
Default	\$ 0.135	550	\$ 0.256	\$ 0.121	\$ 66.81	6	\$ 400.88
100%	\$ 0.144	550	\$ 0.256	\$ 0.112	\$ 61.84	6	\$ 371.02
Basic	\$ 0.106	550	\$ 0.256	\$ 0.150	\$ 82.25	6	\$ 493.48

\*Eversource basic service rate 1/1/23-6/30/23

## What Is Newton Power Choice

Newton Power Choice is the City's electricity supply program for our residents and businesses. The program is a form of group electricity purchasing known as electricity aggregation. Our program provides an opportunity for Newtonians to significantly increase both their own and our community's investment in clean energy.

**With Newton Power Choice, Eversource delivers the electricity; customers continue to contact Eversource for power issues; and Eversource will continue to bill them. The difference with Newton Power Choice is that the City of Newton selects the supplier of the electricity for customers rather than leaving it up to the utility.**

**The City of Newton has been the leader in the State in choosing the highest percentage of renewables of any city or town's electricity aggregation program since signing the first Newton Power Choice contract in November 2018.** Our current Newton Power Choice contract includes 82% local renewable sources such as wind and solar as the Standard/Default for our electricity supply.

Remember that by State law Eversource's prices change every six months, and that future savings from Newton Power Choice cannot be guaranteed. But you can switch from Newton Power Choice back to Basic Service at any time, without any fee.

Learn more about Newton Power Choice and consider opting up to 100% green electricity [here](#).
